## Abstract of JP 2003150466 (A)

**PROBLEM TO BE SOLVED:** To process a plurality of pieces of management information in one communication by collectively handling the plurality of pieces of management information. **SOLUTION:** By separately storing actual data of the management information and a template which is a management information item list describing an encoding method in an agent side and sending the item list and the actual data encoded by the encoding method described in the item list to a manager side from the agent side, an agent can send all pieces of the management information in one SNMP request, and the encoded management information received by a manager can be decoded.
